Examiner: A. M. Iwamaye

**DECLARATION OF MICHAEL A. LORENTE**

I, Michael A. Lorente, declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true. These statements are made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful false statements may jeopardize the validity of the application or any patent issuing thereon.

1. The statement on Applicant's website that it is a "patented" procedure is a mistake. The statement should be that a patent has been applied for on the procedure. This misstatement was unintentional and steps are being taken on Applicant's website to make it clear that the process is not yet "patented."

2. The procedure which is the basis of this pending application was not commercially used and was not available to the public until less than one (1) year before October 13, 2003.

3. The seminar in 1998 in Toronto was given at a time when I was still doing research on the system of the present invention and at that seminar, I disclosed the early results achieved by the system I was working on. I did not disclose the system at that seminar as it was far from complete at that time.

4. There was no public disclosure of the procedure set forth in this application until sometime within a year prior to October 13, 2003.

5. The statement regarding the next millennium was made at a time when I thought what is now referred to as the Accu√2000 system would be ready for use by 2000. The research and perfecting of the system was not completed until sometime within a year prior to October 13, 2003.

Further declarant sayth not

Executed on: 4.23.10

  
Dr. Michael A. Lorente
